**Instructions to Students**

- Answer the following question. Total Marks: 100.
- Draw a clear and neat concept map for each question.
- Identify all key concepts and arrange them in a logical hierarchy.
- Show meaningful linkages between concepts using arrows and connecting words.
- Compare related concepts wherever required and justify the relationships clearly.
- Ensure the concept map is well-organized, readable, and properly labelled.

| <b>Question Type</b>   | <b>Focus Area</b>                                                                                                               | <b>Questions</b> |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Concept Mapping</b> | Map algorithm efficiency concepts using asymptotic analysis, search techniques, recurrence relations, and recursion tree method | Q1               |

**SECTION A – CONCEPT MAPPING****Code of Conduct**

*I Sameer Ahmed G (192421154) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.*

## RUBRICS FOR CALCULATION

| Criteria                  | Weightage | Level 4 – Exemplary                                                         | Level 3 – Proficient                              | Level 2 – Developing                                        | Level 1 – Beginning                     |
|---------------------------|-----------|-----------------------------------------------------------------------------|---------------------------------------------------|-------------------------------------------------------------|-----------------------------------------|
| Concept Identification    | 25%       | Identifies all key concepts from literature accurately and comprehensively  | Identifies most key concepts with minor omissions | Identifies limited concepts; some are irrelevant or missing | Fails to identify essential concepts    |
| Linkages                  | 25%       | Establishes clear, meaningful, and accurate relationships between concepts  | Shows correct relationships with minor gaps       | Relationships are weak, unclear, or partially incorrect     | No meaningful relationships established |
| Organization              | 20%       | Concepts are well structured hierarchically with logical flow and grouping  | Mostly organized with minor structural issues     | Some organization but lacks clear hierarchy                 | No logical organization or structure    |
| Integration of Literature | 20%       | Integrates multiple studies effectively to show connections and comparisons | Shows some integration of literature              | Limited integration; mostly isolated concepts               | No integration of literature evidence   |
| Clarity                   | 10%       | Concept map is clear, neat, visually structured, and easy to interpret      | Generally clear with minor readability issues     | Clarity is reduced; difficult to interpret in parts         | Poorly presented and hard to understand |

## Marks Evaluation:

| Criteria                  | Wt. | Level 4 – Exemplary | Level 3 – Proficient | Level 2 – Developing | Level 1 – Beginning |
|---------------------------|-----|---------------------|----------------------|----------------------|---------------------|
| Concept Identification    | 25% |                     |                      |                      |                     |
| Linkages                  | 25% |                     |                      |                      |                     |
| Organization              | 20% |                     |                      |                      |                     |
| Integration of Literature | 20% |                     |                      |                      |                     |
| Clarity                   | 10% |                     |                      |                      |                     |
| <b>Total Marks (100):</b> |     |                     |                      |                      |                     |

# COMPLETE VIEW OF ALGORITHM PERFORMANCE

TIME COMPLEXITY + SPACE COMPLEXITY = COMPLETE EVALUATION

## COMMON TIME COMPLEXITY (Increasing Order)

|                    |                             |                       |                               |
|--------------------|-----------------------------|-----------------------|-------------------------------|
| $O(1)$<br>Constant | $O(\log n)$<br>Logarithmic  | $O(n)$<br>Linear      | $O(n \log n)$<br>Linearithmic |
| BEST ←             |                             |                       | → WORSE                       |
| $O(1)$<br>Constant | $O(2^{n^2})$<br>Exponential | $O(n^2)$<br>Quadratic |                               |
| WORSE ←            |                             | → BEST                |                               |

## TRADE OFF BETWEEN TIME AND SPACE

### FOCUS ON TIME

Fast execution but may require more memory

### FOCUS ON SPACE

Less memory usage but may take more time

Choosing Right Balance is the key here

## ALGORITHM PERFORMANCE

## TYPES OF SPACE

Input Space - Memory needed to store the input data.

Auxiliary Space - Extra memory used by the algo during execution.

Stack Space - Memory used by Recursive Calls.

## REAL WORLD APPLICATIONS

- Sorting Algorithms
- Searching Algorithms
- Graph Algorithms
- Dynamic Programming
- Operating Systems

## CONCLUSION

Balanced Time and Space Comp leads to efficient, Scalable and Practical Algorithms.
